Foreword

The Indian economy is poised at a strategic inflection point, where the intent of the government and the regulators is aligned to create a strategic force in the development of the financial market ecosystem. GIFT City and International Financial Services Centres Authority (IFSCA) are pivotal in positioning India as a front-runner and the destination of choice for setting up Global or Regional Treasury and Commodity Trading Centres (GRCTCs). In the past, GRCTCs have played a pivotal role in the development of regional and international trade. The Government of India and regulators are blending this proposition with an adequate level of incentives and future-state drivers to encourage Indian and global companies to strategically evaluate GIFT City as the preferred choice for their treasury and commodity trading activities. Along with financial incentives, the broader ecosystem of financial institutions, market participants, brokers, fund managers, insurance and rating agencies, foreign banks and asset managers have seen a rapid increase in interest in setting up initiatives.

At EY, we see this as a strong opportunity and future-oriented reform that could transform not just the region but also the way international business and trade can grow and evolve.

I would strongly encourage a solution-oriented approach and dialogue to evaluate its feasibility and future form to suit your respective business models.

Hemal Shah

Partner, Risk Consulting,
EY India

Executive summary

Amid growing global volatility, multinational corporations are re-evaluating how they manage liquidity, financial risk and commodity trading. Global / Regional Corporate Treasury Centres (GRCTCs) are emerging as a strategic solution to these challenges. Acting as internal hubs for financing and commodity-related activities, GRCTCs enable companies to streamline operations, enhance transparency, and optimize financial and trading decisions across jurisdictions.

This white paper explores the purpose, functions and structure of GRCTCs. It outlines how these centers centralize cash management, intercompany lending, financial consulting, and commodity trading. By standardizing policies and offering better visibility of group-wide liquidity, GRCTCs help companies manage risk more effectively and negotiate better terms with financial counterparties. Some GRCTCs also extend their scope to operational areas such as procurement, logistics, and settlements, enabling end-to-end trade oversight.

The paper identifies the key benefits of GRCTCs, from operational efficiency and cost optimization to improved access to funding, technology integration, and favorable tax treatment. It also highlights how location strategy plays a pivotal role, with companies factoring in time zone alignment, regulatory ease, cost of setup, and proximity to vendors and financial partners.

Global benchmarks such as Singapore, Hong Kong, Dubai and European hubs have long offered attractive environments for GRCTC setups. However, emerging locations like Shanghai, Kuala Lumpur, Bangkok—and notably, India's Gujarat International Finance Tec-City (GIFT City)—are increasingly gaining traction due to their lower costs and expanding incentives.

The paper takes a closer look at India's regulatory efforts to position GIFT City as a destination for GRCTCs. It discusses the International Financial Services Centres Authority's (IFSCA) frameworks and recent revisions to clarify permissible activities and enhance the ease of establishing Global/Regional Corporate Treasury Centres (GRCTCs). The steps include a 2024 consultation paper to address ambiguities, and a revised circular issued in April 2025 that reflects stakeholder feedback.

With supportive regulations, growing infrastructure, and increasing industry interest, India's GIFT City is poised to join the ranks of established GRCTC hubs—offering multinational corporations an attractive new base for global treasury and commodity trading operations.

1

Understanding Global/Regional Corporate Treasury Centres : Purpose, functions and structure

1.1 What is a GRCTC and how does it work?

A GRCTC operates as an internal banking and commodity trading hub for multinational companies with operations across geographies. Its primary goal is to centralize fund management, facilitate commodity trades, manage trading costs, and enhance financial resource utilization across the group.

1.2 Key functions of a GRCTC

A GRCTC typically manages group-level financing and intercompany lending, consolidates cash and liquidity, and delivers financial consulting and risk management support to group entities. It serves as a centralized hub for financial, trading, and hedging activities, enabling tighter control, better risk mitigation, and improved strategic alignment across the organization. By standardizing processes and policies, it helps ensure transparency, consistency and cost efficiency. Centralizing these functions also enhances the group's ability to negotiate favorable terms with banks and financial counterparties. In some cases, the GRCTC extends its scope to cover operational areas such as commodity procurement and marketing, allowing for comprehensive oversight of trade-related aspects including financing, logistics, freight, settlements and accounting.

2

Why GRCTCs matter: Business drivers and benefits

2.1 Addressing global volatility through centralized treasury functions

CFOs, treasurers and trading heads have been experiencing stress due to rising geopolitical uncertainties. From challenges such as volatility in foreign exchange and commodity prices, to struggling with maintaining robust liquidity and cash flow, many are turning their attention to improving and aligning their treasury and commodity trading strategies.

2.2 Strategic benefits

The key benefits of establishing a successful GRCTC are:

- **Group-wide transaction netting and cash visibility:** Organizations face transparency issues while managing cash in multiple currencies with various banking partners. Consolidation enhances the grasp of global liquidity positions, increasing the efficiency and coordination of their payment processes. Companies can also net their transactional exposures, offsetting inflows and outflows across various entities for respective currency pairs. This approach minimizes the need for multiple transactions, enabling a single, simplified transaction between entities and the GRCTC. This not only reduces operational complexity but also mitigates exposure to risks associated with multi-entity cash flows.
- **Corporate tax incentives:** One of the factors influencing the decision to establish GRCTCs in specific regions is the availability of tax incentives provided by local governments. These include benefits such as reduced corporate tax rates, tax holidays, and exemptions on specific financial transactions. Moreover, customs duty exemption on goods and services is also an incentive that certain regions provide. These incentives not only make the region financially appealing but also create a competitive advantage for companies operating within those jurisdictions.
- **Proximity and access to financial and trading counterparts, and market participants:** Securing financing from multiple banks in these regions is more cost-effective for companies. Competitive rates attract companies looking to obtaining working capital funding, capex loans and intercompany financing, etc. A corporation can leverage its consolidated financial position to negotiate more favorable terms with banks. These credit terms can also be improved, which can be further extended to group entities. Companies also tend to transact with related physical and financial traders to optimize trade P&L (profit and loss).
- **Ease of doing business:** A common benefit observed by multinational corporations across preferred locations for GRCTC setup is the ease of doing business and availability of various market participants. The permissibility of various business activities that GRCTCs are required to undertake proves to be a significant incentive. Banks (both local and international) and traders (both physical and financial) offer flexibility while dealing and transacting, which acts as a big contributor.
- **Efficient commodity trading and hedging:** The consolidation of commodity trading and hedging operations is vital for companies in the commodity sectors because of the differing commodity trends in various regions. The broad access to global markets, commodity exchanges and counterparties provided by international financial hubs makes executing commodity transactions from these hubs highly appealing and cost-effective. Additionally, access to international trade routes and logistic partners also helps in reducing the secondary costs.
- **Adoption of Treasury and Commodity Trading and Risk Management (CTRM) technology:** Treasury Management Systems (TMS), data analytics, and digitalization have refined corporation's technology infrastructure. This is instrumental in centralizing treasury operations and integrating local entities with the corporation. There are multiple options of TMS and CTRM providers available to organizations that can support in consolidating their treasury and trading activities.
- **Operational efficiency and cost optimization:** Corporations view operational effectiveness as another key motivator. GRCTCs offer significant operational benefits, such as reduced costs and streamlined processes. Companies can optimize resource allocation, requiring fewer personnel and thereby lowering human resource expenses. Companies can also reduce office space costs such as rental expenses.

3

Designing the GRCTC: Key structural considerations

All payments/remittances to and from customers/vendors are undertaken by the GRCTC and goods are shipped to parent under Bill-to Ship-to model

Credit terms, working capital, bank led borrowing and inter-company lending, consolidation of funds, investments, hedging and derivative trading are all activities managed by the GRCTC

GRCTC monitors global bank accounts centrally. Funding of entities and drawing down of limits where required is undertaken by the GRCTC

Physical and financial commodity trade contracts are settled with respective counterparties

4

Selecting the right location: Factors influencing the GRCTC setup

4.1 Key decision-making criteria

CFOs, treasurers and trading heads face a critical choice when establishing GRCTCs, which is selecting the optimal location. Some of the factors influencing their decisions are:

1. **Time zone:** Time zone alignment with the corporation's headquarters is crucial as it facilitates smoother transactions between the main office and the GRCTC.
2. **Proximity to vendors:** Another important consideration is the GRCTC's proximity to the company's vendors and suppliers. For instance, a company that imports predominantly from the Far East may opt to setup a GRCTC in East Asia to maintain stronger ties with these business partners. Proximity to physical vendors and financial counterparts helps optimize the overall cost of supply chain financing.
3. **Conducive to trade (direct and merchant trading) and related financing:** Selecting an optimal location for establishing a GRCTC would significantly bolster trade operations (both direct and merchant trading) and augment associated financing capabilities.
4. **Setup costs:** The cost of establishing a GRCTC is influenced by the chosen location, with more economically and commercially developed areas typically incurring higher setup expenses.
5. **Proximity of banking counterparts for borrowing, hedging and investments:** The presence of their relationship banks in regions with GRCTC setup is critical. For example, an organization dealing with the Indian branch of a Singapore-based multinational bank would receive similar or better treatment, flexibility and ease of doing business with the Singapore branch or head office by setting up a GRCTC in Singapore and running its treasury and trading activities there.
6. **Regulatory environment:** A favorable regulatory environment minimizes hurdles, allowing for quicker decision-making and streamlined processes. Additionally, reduced regulatory complexities enhance the ability to manage financial risks effectively and optimize capital allocation.

5

Global benchmarks: Established GRCTC hubs

Locations such as Singapore and Hong Kong in Asia, and Dubai in the Middle East are preferred choices for GRCTCs due to their ease-of-doing-business environment, existing tax treaty network with numerous countries, cheaper running costs, and proximity to Far East vendors and suppliers.

Western multinational corporations prefer Europe, with popular locations such as the Netherlands, Ireland and the UK being prime locations for setting up GRCTCs due to their geographical accessibility, well-established economic infrastructure, and relaxed regulations of countries in the European zone.

Other regions in Asia that are enhancing their GRCTC businesses

Over the past decade, cities like Shanghai, Kuala Lumpur, Bangkok, and more recently some of the Indian cities have gained recognition as viable locations for GRCTCs. Organizations are primarily attracted due to the comparatively cheaper operational and setup costs compared to the established locations. Moreover, these up-and-coming locations have also started offering similar benefits and incentives to GRCTCs.

6

Spotlight on India: Gujarat International Finance Tec-City (GIFT City) and International Financial Services Centre (IFSC)¹

6.1 GIFT City's strategic intent

GIFT City was set up as a smart city with a clear goal, i.e., to offer a wide range of financial services—like banking, insurance, capital markets and asset management—through an International Financial Services Centre (IFSC). These services are available to those who want to transact in foreign currencies instead of Indian Rupees.

6.2 Sectors with a growing presence in GIFT City

GIFT City has become a hub for various key sectors, including:

1. Aircraft and ship leasing
2. Banking services
3. Capital markets
4. Finance companies
5. Business, Accounting, Taxation, and Financial (BATF) services
6. Bullion exchange
7. Financial technology (FinTech)
8. Foreign universities

6.3 GIFT City's relevance for GRCTCs

There has also been keen interest in the concept of establishing a GRCTC within GIFT City, with IFSC offering tax benefits and regulatory concessions encouraging Indian and global corporations to setup presence there, subject to the eligibility criteria for setting up finance companies within the city.

¹IFSCA circular: Framework for undertaking Global/Regional Corporate Treasury Centres Activities by Finance Company/Finance Unit in IFSC (25th June 2021)

7

IFSCA's role: Regulatory steps to support the growth of GRCTC

In support of the GRCTC initiative, the IFSC unveiled a comprehensive framework titled, "Global/Regional Corporate Treasury Centre Activities by Finance Company/ Finance Unit,"² in June 2021, listing the permissible treasury activities and services for FX risk management, cash management, fundraising, intra-group financing and trading in commodity derivatives.

7.2 Consultation paper on proposed revised framework for undertaking Global/Regional Corporate Treasury Centres (GRCTC) activities by Finance Company/Unit in IFSC³:

1. Due to uncertainty on whether banks in GIFT City provided all treasury related services and solutions or the lack of a precise definition for a re-invoicing center, this presented some transparency issues with the establishment of a GRCTC business model. To address this, the IFSCA issued a consultation paper on 12 September 2024 detailing each allowed activity and outlining the specific methods for conducting them.
2. Constitution of an Expert Committee on positioning GIFT IFSC as a Global Commodity Trading Hub: Given India's status as a major consumer market for various commodities, the IFSCA initiated the formation of an "Expert Committee on positioning GIFT IFSC as a Global Commodity Trading Hub"⁴ in May 2022. The committee was primarily setup to explore the potential advantages of GIFT City as a global commodity trading hub, including activities such as physical trading, merchanting trade, and both OTC and exchange-traded derivatives.

²IFSCA circular: Framework for undertaking Global/Regional Corporate Treasury Centres Activities by Finance Company/Finance Unit in IFSC (25th June 2021)

³Consultation paper on proposed revised 'Framework for undertaking Global/Regional Corporate Treasury Centres activities by Finance Company/Unit in IFSC' September 12, 2024

⁴Constitution of an Expert Committee on positioning GIFT IFSC as Global Commodity Trading Hub

8

Revisions to the GRCTC framework

8.1 Recent developments

Considering the valuable feedback and insights received from the various stakeholders on the consultation paper released in September 2024, the IFSCA implemented a series of incremental updates and modifications to the existing guidelines. This was officially introduced in the form of a circular dated 5 April 2025 titled "Framework for Finance Company/Finance Unit undertaking the activity of Global/Regional Corporate Treasury Centers"⁵ These revisions aimed to enhance the current framework governing the establishment and operation of GRCTCs.

To facilitate a better understanding of these changes, a detailed comparison between the previous and revised guidelines for setting up GRCTCs in the GIFT City is provided below. This comparison highlights the enhancements and revisions made to each permissible activity that a GRCTC can undertake, ensuring that stakeholders remain well-informed about the new framework and its implications.

S.No	Activity	Guidelines (25 June 2021)	Enhancements to guidelines (5 April 2025)
1	Borrowing	GRCTC can borrow by collateralizing inventory held by its Group Entities	Inclusion of the permissibility to borrow in the form of inter-co deposits with tenor, cost, among others, to be determined by GRCTC or the service participants
2	Credit arrangements	A GRCTC may undertake the arranging of credit facilities	Includes any form of lending activities, providing credit guarantees, performance bonds or any other credit facility
3	Undertaking derivative transactions (OTC and exchange traded)	A GRCTC may transact in foreign currency rupee derivatives only where the foreign currency leg is in a freely convertible currency.	- OTC and exchange traded derivative transactions permitted in IFSC can be done with counterparties within and outside GIFT city - Non-permitted transactions in GIFT city can be done with counterparties outside GIFT city - GRCTC can undertake derivatives to hedge risk on its own as well as on behalf of its service recipients
4	Factoring and forfaiting	Undertake factoring and forfaiting activities for its Group Entities	Before undertaking these activities, the GRCTC must register itself with Registration of Factors Registration of Assignment of Receivables

⁵IFSCA circular: Framework for Finance Company/Finance Unit undertaking the activity of Global/ Regional Corporate Treasury Centres (5 April 2025)

5	Acting as a re-invoicing center	Acting as a re-invoicing center for Group Entities as long as such re-invoicing is undertaken for the limited purpose of ensuring that liquidity flows and financial risk can be aggregated and netted	Re-invoicing is permitted for financing the purchase and sale of goods on behalf of the service recipients, provided that GRCTC does not take physical possession of such goods and one of the parties to each re-invoicing transaction is a service recipient
6	Liquidity management	Managing and optimizing multi-currency cash management and liquidity management, including cash forecasting, arranging credit facilities and cash pooling	■ Pooling of funds, with header / master account to be held by IFSC Banking Unit (IBU) along with its conceptualization and development and negotiation with IBU ■ Processing payments to vendors or suppliers on behalf of service recipients ■ Netting and concentration of cash to optimize cashflows, working capital, interest and tax payments
7	Maintaining financial relationships		■ Managing relationships with banks, credit rating agencies (CRAs) and other counterparts ■ Undertaking valuation and accounting activities ■ Undertake covenant testing ■ Maintaining transaction history and audit trail ■ Liaise with external and internal auditors
8	Advisory service related to financial management, including financial risk management	Advising or providing services in relation to the management of interest rate risk, foreign exchange risk, liquidity risk, credit risk, commodity risk or and any other financial risk of the Group Entities;	Specified activities of providing advice relating to financial management includes: ■ Cashflow forecasting ■ Investment appraisal ■ Tax planning ■ Operational risk management ■ Financial risk management including Identifying natural hedges and offsets within group entities ■ Interest rate risk management ■ FX, Commodity risk management ■ Advising on hedging strategies ■ Monitoring financial risk positions
9	Advisory service related to funding and capital market activities		Services include: ■ Capital structure optimization ■ Investment management ■ Liquidity Management ■ Monitoring and managing credit ratings ■ Portfolio management ■ Managing funding from the sale of receivables or payables with external parties

8.2 Factors driving greater business participation in GRCTCs at GIFT City

To drive greater business participation, further clarification and simplification of permissible treasury activities in GIFT City are necessary. These updates would help organizations evaluate how to set up full-fledged trading entities and treasury operations. Key drivers include:

1. **Procurement, export and trading activities:** The revised guidelines (dated 5 April 2025) offer clarity on the GRCTC's role as a re-invoicing center. GRCTCs can now facilitate the financing of goods bought and sold on behalf of service recipients, supporting operations under a Bill-to-Ship-to model—subject to adherence with shipping laws and regulations.
2. **Guidelines on commodity trading:** A lack of clear regulations for OTC and physical commodity trading has restricted institutional investor participation. A formal regulatory framework will help integrate India more deeply into global trade.
3. **Cash pooling activities:** While cash pooling is permitted by the IFSCA, cash pooling guidelines can be enhanced to explicitly cover physical, notional, and cross-currency pooling structures.
4. **Currency, commodity and interest rate hedging:** The revised guidelines (dated 5 April 2025) clarify that OTC derivatives can be transacted with both internal and external counterparties. However, comprehensive regulations for hedging commodities—both OTC and exchange-traded—are still required.
5. **Freight hedging:** Just as FX and commodity hedging, businesses have emphasized the importance of freight hedging to become a permitted activity, along with uniform guidelines. Currently, many global firms conduct this from hubs like Dubai and Singapore.
6. **Trade credit and freight insurance counterparts:** Establishment of trade credit and freight insurance companies in GIFT City is immensely important for corporations involved in factoring and supply chain financing activities. The presence of these counterparts enhances GIFT City's appeal as a comprehensive financial ecosystem. Due to tax incentives, trade credit and freight insurers may offer competitive premiums, making it more affordable for businesses to secure insurance for factoring deals.
7. **Trade finance solutions:** GIFT City should offer a full suite of trade finance solutions—factoring, forfaiting, receivables finance, supply chain finance and invoice discounting—to strengthen its appeal.

**Subject to the fact that all applicable shipping laws and regulations will be strictly adhered to. Any conclusions or recommendations are contingent upon full compliance with relevant legal requirements.*

8.3 Key perceived macro-economic benefits

The establishment of regional treasury centers in GIFT City may offer several key macroeconomic benefits, such as:

1. **GDP growth:** The proposed improvements aim to greatly enhance market performance and stimulate GDP growth, benefiting a variety of sectors. For example, the DMCC accounts for 7% of Dubai's GDP⁶. Singapore has been ranked the largest FX trading center in the Asian time zone and the third largest globally after London and New York⁷.
2. **Job creation and skill development:** The establishment of GRCTCs in GIFT City is expected to generate a substantial number of jobs and demand for skilled labor. To compare, the DMCC has provided employment opportunities to nearly 100,000 individuals⁸. Over 270 companies hold GTP status in Singapore, enjoying concessionary tax rates⁹. The upskilled workforce and the boost from the GTP initiative have made a tremendous contribution to Singapore's ranking top in the World Bank's Human Capital Index 2020¹⁰.
3. **Infrastructure:** The high-quality infrastructure of GIFT City positions it to become one of the leading smart cities globally. In 2023, the DMCC has accommodated over 25,000 businesses¹¹.
4. **Domestic and foreign investment inflows:** GIFT City's transparent and well-regulated market environment is likely to attract both foreign and domestic investors. Like Singapore and Dubai, which are known for their robust trading hubs, GIFT City could become a magnet for investments.

¹¹DMCC_AnnualReport_2023.pdf

Conclusion: The strategic value of GRCTCs in today's global landscape

GIFT City has the potential to be ranked among the world's leading financial hubs for organizations looking to establish GRCTCs. Its infrastructure promotes a business-friendly environment that accelerates organization's growth, international finance and foreign investment, signaling a promising future.

Businesses are eager to observe the forthcoming revisions and enhancements to the existing guidelines regarding GRCTC establishments. The IFSCA has shown considerable interest in further detailing the framework with greater transparency, visibility and strategic additions. These changes are anticipated to ease integration into GIFT City and enable the establishment of operational GRCTCs that enhance the efficiency of global treasury functions.

Given the diverse array of regulatory bodies such as the RBI, SEBI, and authorities overseeing FEMA, transfer pricing, income tax laws, as well as corporate legislation like the Companies Act, it is essential to establish a simple roadmap to converge and facilitate these regulations and transactions within the GIFT City jurisdiction.

This implementation will ensure that treasury activities can be performed smoothly and seamlessly. This alignment with existing regulations will not only enhance compliance but also promote transparency and efficiency, ultimately supporting the growth and stability in GIFT City.
